REDUCTION

"I contacted Capture H₂O to see if they were capable or knowledgeable enough to maintain a system no longer supported by the manufacturer. To my satisfaction they have demonstrated a high level of knowledge regarding the technology and in addition has provided us with operational guidance and training. We are very pleased with our decision to use Capture H₂O."

Jere Westlotorn
National Facilities Manager
for Westfield

How we did it.

Overview

Unibail-Rodamco-Westfield SE is a European commercial real estate company headquartered in Paris, France. Capture H₂O services the cooling water at 7 of the URW shopping malls in the United States.

Our Solution

The Capture H₂O High Cycle program is utilized at each of the Westfield sites. However, as a testament to the flexibility of the High Cycle program, each of these sites uses a variety of makeup water sources in the tower including rainwater, groundwater, well water, and reclaimed water.

The flexibility of the patented High Cycle program is unique and allows URW to utilize the cheapest source of water available.

Summary

With the ability to use alternative and varying water sources, URW was able to save 12.6 million gallons of water in 2020. The Capture H₂O High Cycle program has also helped URW become known as a sustainably-minded company through recognitions such as [LABBC Innovation 2020 Awards](#).
